

Data Appendix: Read me

These files are the replication files of the empirical results of the paper "Foreign Expansion, Competition and Bank Risk" by Ester Faia, Sébastien Laffitte and Gianmarco Ottaviano.

These replications files are based on the Stata software. We provide 10 .do files and 1 .dta file.

In order to replicate the tables and figures of the paper and of its online appendix, one has to set his own path in the file "0.read_me.do" and run this file. This file also describes each other do-file and provides more information about the external packages used to generate these results.

Note that these files generate the raw tables that have been used to design the tables in the paper and in the online appendix.
